

# THE BEST LINES OF COMMUNICATION *INCLUDE* A MARRIAGE OF WIRELESS AND WIRED TECHNOLOGY

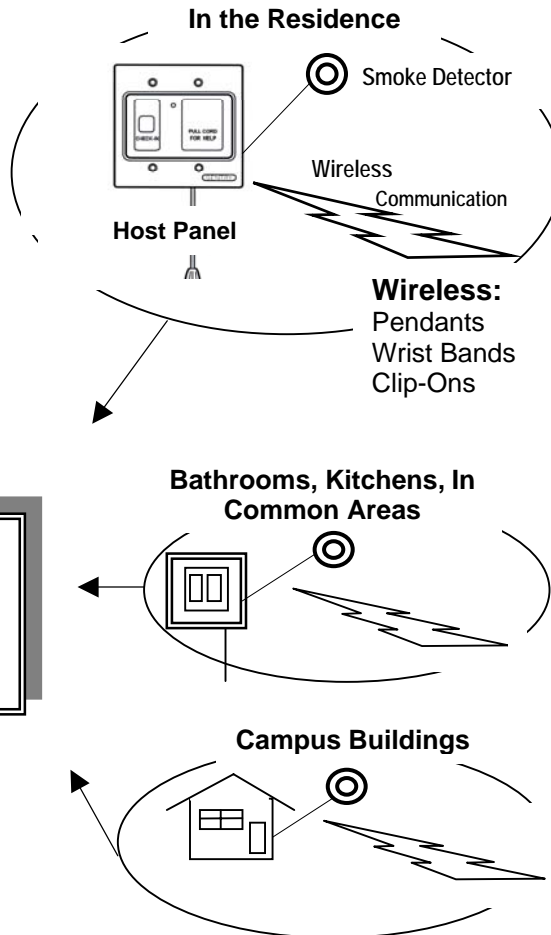

## Reliability of Wired Systems and Convenience of Wireless.

### EMERGENCY CALL SMOKE WARNING SYSTEM

Pocket Page  
Two-way Radio  
Nurse Call  
Remote Displays

Fire Alarm Systems  
Patient Wandering  
Security Systems  
CCTV  
HVAC

**Wireless:**  
Pendants  
Wrist Bands  
Clip-Ons

**Sentry** has a system that is easy to implement in facilities from 20 to 4000 rooms. It integrates to nurse call, patient wandering, smoke detectors, magnetic locks, CCTV, HVAC, in-house security, motion detection, remote displays, fire alarms, . . . and stores data for facility management reports.

Because **Sentry** integrates both wireless and wired technologies it addresses the *disadvantages* of a 100% *wireless* system, such as: interference to patient equipment, dead zones, battery replacement, lost, damaged or missing pendants.

Each **Sentry** host panel is fully supervised, thus alerting facility personnel of damaged, missing or broken equipment.

Sentry's lightweight transmitters give patients freedom and security.
