- Generate reports, print them or save them to a file

HM-FR2-SWx* Sentry Freedom Wireless Software

DESCRIPTION:

The Sentry Freedom system displays alarms, alerts, battery and trouble indications, resident information, and lists of residents by name and room. The system retains a database of all system activity, and reports are available by resident, by type of call, and by daily activity.

Staff has constant access to information on all calls placed into the system by way of PC displays, pagers, voice-annunciation over two-way radio, and remote displays. Password login provides tracking documentation of the operator who silences and acknowledges each call.

The system displays windows for critical alarms, alerts, device trouble, resident information, and reports. A separate window shows a list of residents by name or room number for easy reference. System administration is password protected and allows access to system configuration, passwords, and report contents.

All system programming and activity is stored in a database on the local computer, on the system server, or on an off-site server for access and review by appropriate personnel.

MULTIPLE LICENSING OPTIONS:

* x denotes licensing option

HM-FR2-SW1 1 – 500 transmitters

HM-FR2-SW2 500 – 8000 transmitters

HM-FR2-SWN 1 – 8000 transmitters – 3 license network

REQUIRED COMPONENTS:

Pentium 4 PC running Windows XP (Pro Edition Recommended).

Processor speed: minimum 2.8 GHz

Installed Memory: minimum 256 meg

SVGA 1024X768 video adapter and monitor

Keyboard and mouse

CD-ROM drive

PC speakers

HM-6040 Network Coordinator

HM-5000T Repeaters as required.

Transmitter devices for call placement or monitoring as required

Note: For total wireless coverage of facility a site survey may be required.

ARCHITECTS' AND ENGINEERS' SPECIFICATIONS

The wireless software shall be HM-FR2-SWx provided by Heritage MedCall. The wireless software shall require a PC running Windows XP with a minimum processor speed of 2.8 GHz, 256 meg of memory or greater, SVGA 1024X768 video adapter and monitor, CD-ROM drive, keyboard and mouse. The PC shall be a dedicated system for running only the Sentry Freedom Wireless Software HM-FR2-SWX. The software shall be capable of managing up to 8000 devices. The wireless software shall be able to view and log all alarms, alerts, battery and trouble indications for immediate notification and storage for future retrieval. The wireless software shall alert users of all events via pc speakers, email, pagers or voice annunciation as per requirements. The wireless software shall indicate the type of call, time of call, time of call silenced, time of call cancelled.
