Model HM-1240 ACTIVITY SENSOR

- 900 MHz Spread Spectrum
- Selectable Sleep timer
- Smooth rounded design to blend-in with the environment
- Minimal battery usage
- Built-in Supervision
- Pet immunity
- Check-in every 30 minutes

DESCRIPTION:

The HM-1240 activity sensor is specifically designed for senior living environments where a notification of daily activity is necessary. Selectable fixed sleep intervals of two, four or six hours are used to minimize wireless traffic. Features a rounded design to blend-in with the environment and offers extended battery life in high traffic applications. Advanced digital signal processing to recognize "human signatures", size and movement, therefore reducing false alarms. Includes tamper protective case, battery life and transmitter supervision. Immune to radio frequency interference, vibration, static, lightning and ambient temperature changes.

COVERAGE:

Motion detector coverage pattern of 85° and covers a distance of 49 feet.

OPERATION:

Transmitter signals an activity condition when motion is detected by the sensor. Includes modes for coverage and transmission testing. *Note: Not to be used as a security device.*

MOUNTING:

Wall or corner mounting options using provided anchors with easy access to flip cover for battery replacement. Optional ceiling mount available.

SPECIFICATIONS:

Dimensions: 4.5" H X 2.5" W X 1.6" D
Operating temperature: 32° to 122° F
Mounting Height: 7 to 9 feet

POWER:

Includes 3.0V Lithium battery.
Average Battery Life 4 – 5 years.
Battery type: CR123A
